

## Y1 Alerter – Network Monitoring & Alerting

### Alerting Features

- 24x7 Network & system devices fault monitoring & condition management
- Customizable network operation centers device availability & processes features
- LAN/WAN performance statistics
- Server utilization & processes
- Immediate downtime notifications
- Abnormal packet / data patterns

### Simplicity

- Easy to use & secure internal appliance
- Web-enabled 24x7 network & systems management services
- Easily definable alert levels
- Built on secure & economical open source technologies
- Auto learning modes & suggested alert levels reduces learning and analysis time
- Interfaces to IDS & packet monitoring devices

### Installation

- Monitors SNMP enabled network devices
  - Port / link statistics
  - Network services running
  - LAN/WAN bandwidth utilization/perform
  - Bi/Tri State alarm trigger devices
- Tracks Server Performance
  - CPU, memory, devices utilization
  - Event Logs
  - Pattern matching for threats, attacks, scans
  - Process functions

### Alerts & Reporting

- 2-Dimensional graphic maps selectable drilled down to display statistics
- Notification via easily definable
  - emails, individual or group
  - cell phones, pagers
- Configurable tracking including reboots
- Trigger alarms thresholds
  - Connectivity, downed circuits, faults
  - Server performance points
- Fail-over notification
- Historical information views
